

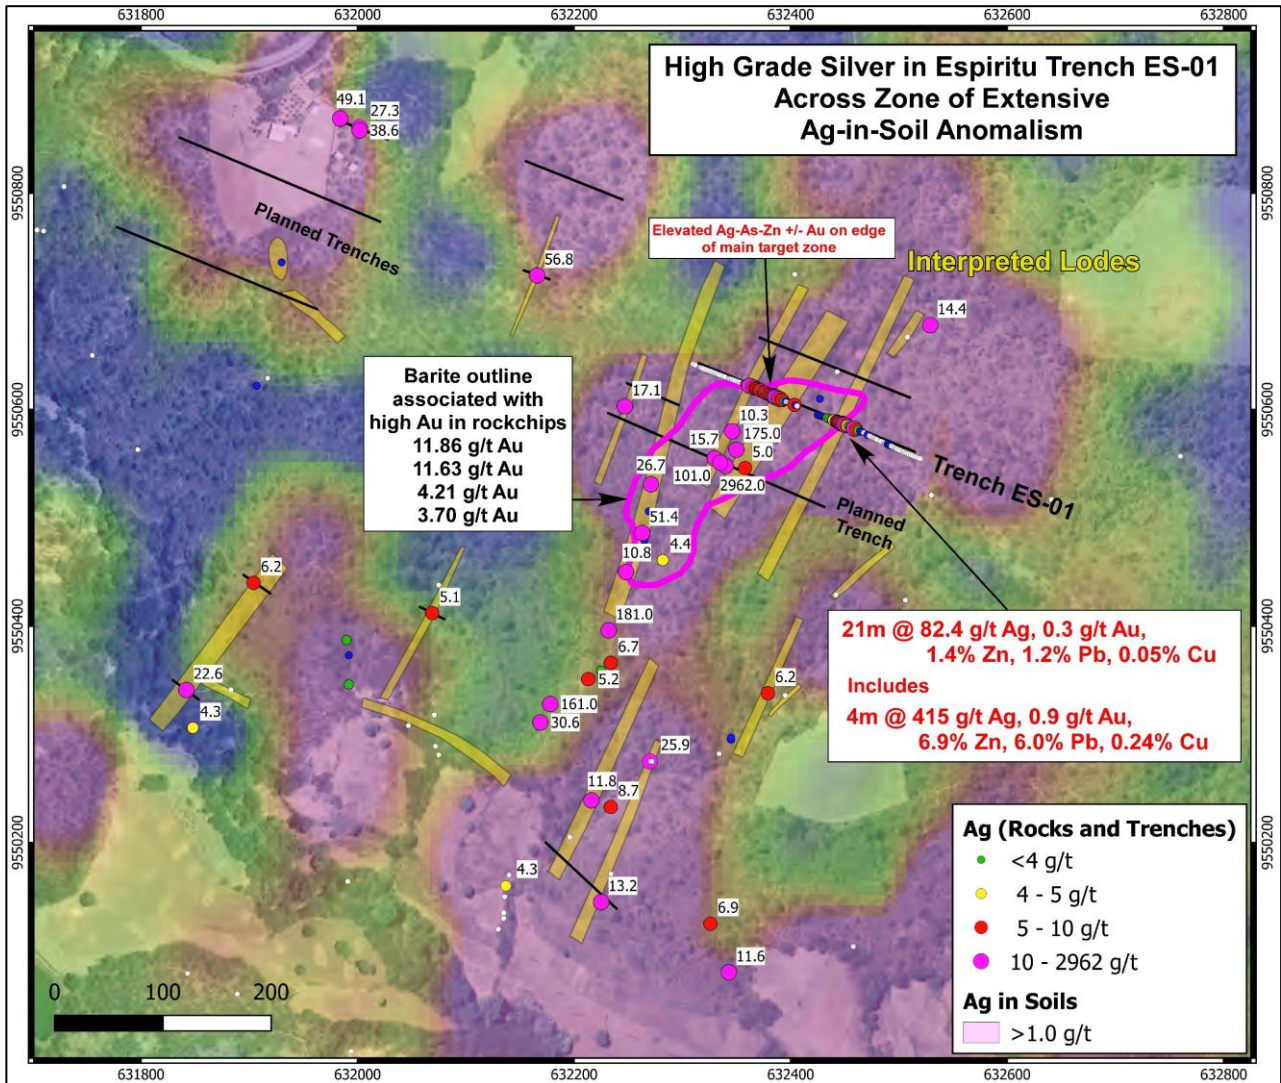

**Figure 1:** Bramaderos concession showing grid soil sampling areas in yellow dots to be followed up during 2020. The exploration team is currently working at Espiritu and E1.

**Figure 2:** Espiritu target area showing current and planned trench locations, silver in rock chip values, and gold in rock chip samples within the barite zone. The background image is silver-in-soil sample results.

All rock chip samples spatially plotted on Figure 2 (Outcrop, Subcrop and Float):

Interval = Range of intervals (Grab samples, Chip samples and Channel samples 0.95-2.0m).

Population = 90 samples (Au and Ag).

Range = Au (0.0025 to 11.86 g/t); Ag (0.05 to 2962 ppm).

Mean = Au (0.55 g/t); Ag (53 ppm).

All trench samples plotted on Figure 2:

Interval = Channel samples in trench (1.0-2.0m).

Population = 151 samples (Au and Ag).

Range = Au (0.0025 to 1.43 g/t); Ag (0.10 to 1001 ppm).

Mean = Au (0.06 g/t); Ag (14.2 ppm).
